

Reject NAB's petition 04-160. XM satellite radio deserves the ability to provide instant weather and traffic. They offer a service "better" than the local station who refuse to provide a similar "on demand" service. Local stations demand I listen to advertisements or their programming for 15 to 30 minutes in the chance they might offer a tidbit of info about traffic in the area I am driving. XM provides a much better service to the consumer. Please do not give in to the elite media owners that refuse to provide what the consumers wants.

thank-you
